

2025/2026 Artificial Intelligence Training Program - Assessment of Knowledge (Test)

Employee Name (Printed): _____ Date: _____

Employer: _____ Department: _____

Original Test Score: _____ Corrected Test Score: _____

Please complete each question by picking the correct answer (circle one letter):

1. What best describes Artificial Intelligence (AI)?
 - A. Computers that think and reason like humans
 - B. Systems that perform tasks normally requiring human intelligence
 - C. Software that always produces correct answers
 - D. Technology that replaces human decision-making

2. How do most AI systems generate outputs?
 - A. By understanding intent and context
 - B. By applying legal and ethical reasoning
 - C. By identifying patterns in large amounts of data
 - D. By following fixed decision rules

3. Which of the following is an appropriate public-sector use of AI?
 - A. Summarizing documents with human review
 - B. Replacing human judgment in policy decisions
 - C. Making final eligibility determinations without review
 - D. Social scoring of individuals

4. Which statement about AI accuracy is correct?
 - A. AI outputs are always accurate
 - B. AI only makes mistakes when data is missing
 - C. AI may produce confident but incorrect information
 - D. AI automatically verifies its own results

5. Why may AI sometimes produce incorrect or misleading information?
 - A. AI updates itself continuously with new laws and policies
 - B. AI always understands context and intent
 - C. AI generates outputs are based on probability
 - D. AI automatically verifies all information before responding

6. Which statement best reflects how AI risk varies by use case?
 - A. All AI uses carry the same level of risk
 - B. AI is low risk when it replaces human judgment
 - C. Some AI uses are inherently riskier than others
 - D. AI risk does not apply to public sector work

7. What is required when using AI tools in government work?
 - A. Use of any publicly available AI tool
 - B. No human review is necessary
 - C. Only employer-authorized AI tools may be used
 - D. AI decisions replace accountability

8. Which of the following uses of AI is prohibited?
 - A. Automating repetitive tasks
 - B. Social scoring of individuals
 - C. Drafting routine correspondence
 - D. Organizing non-sensitive data

9. What should employees do if AI use begins to produce negative impacts?
 - A. Input confidential data
 - B. Continue using the tool
 - C. Rely on AI to correct itself
 - D. Halt AI use

10. Who is ultimately accountable for decisions made with AI assistance?
 - A. The AI system
 - B. The software vendor
 - C. The government organization
 - D. No one

2025/2026 Artificial Intelligence Training Program (Answer Key)

1. B. AI performs tasks that normally require human intelligence
2. C. Most AI systems generate outputs by identifying patterns in large amounts of data.
3. A. An appropriate public-sector use of AI is for summarizing documents with human review.
4. C. A correct statement about AI accuracy is that it may produce confident but incorrect information.
5. C. AI may sometimes produce incorrect or misleading information because AI generates outputs based on probability.
6. C. The statement that best reflects how AI risk varies by use case is that some AI uses are inherently riskier than others.
7. C. When using AI for government work, only employer authorized AI tools may be used.
8. B. One of the prohibited uses of AI is the social scoring of individuals.
9. D. If AI begins to produce negative impacts, you should halt its use.
10. C. The government organization is ultimately accountable for decisions made with AI assistance.
